

# MITER GATES CREST GATE

## Water Control Gates:

- Tractor Gates
- Jet Flow Gates
- Crest Gates
- Floating Bulkheads
- Roller Gates
- Tainter Gates
- Miter Gates
- Bonneted Gates
- Slide Gates

## Valves:

- Fixed Cone Valves

## Gate Operating Systems:

- Hydraulic Systems
- Cable Drum Hoists
- Electric Operators
- Manual Operators

The historic San Antonio River has long served as the heart of the city, and each year the world-renowned River Walk draws millions of visitors. Originally built in 1938-41, the new 1.3 mile expansion, called the Museum Reach, opened in May 2009.

Steel-Fab designed and manufactured two sets of miter gates for the lock chambers used to raise or lower boats where the river level changes, and a crest gate to provide stable, maintainable flood control; thereby increasing recreational and economic development while reclaiming the river's natural meanders and appearance.
